Beyond Lightweight - Building the World of Tomorrow

Public Lecture by Werner Sobek

kindly supported by

INGENIEUR
BAUKUNST eV 

The International Association of Shell & Spatial Structures (IASS), founded by Eduardo Torroja in 1959, seeks to achieve further progress by an exchange of ideas among all those interested in lightweight structural systems such as lattice, tension, membrane and shell structures, and in the creative integration of architecture and structural engineering more broadly.

After Brasilia (2014), Amsterdam (2015), Tokyo (2016), this year's international symposium takes place at the [HafenCity University in Hamburg](#).

Today's challenges in built environment are immense. They require inter- and transdisciplinary skills. At the INTERFACES between architecture and engineering, new strategies and solutions need to be developed. The same applies to the INTERFACES between science and practice.

In the context of the yearly symposium of the International Association of Shell & Spatial Structures (IASS) we are pleased to invite you to this the public lecture by Werner Sobek.

Wednesday, September 27th at 07:00 pm
Holcim Auditorium
HafenCity Universität, Überseeallee 16, 20457 Hamburg

HCU | **HafenCity Universität**
